1960 INTERNATIONAL ORCHID SHOW SPECIAL  
MATURE, BLOOMING SIZE, ORCHID HYBRIDS

If you are attending the 16th International Orchid Show in Miami (Feb. 19-22), visit the Ryerson Sales Booth and choose the plants that appeal to you. Take them with you, or order for later shipment, as you please.

But, if you are not so fortunate as to make it to our grand annual show, order by mail, and your plants will start on their way to you promptly — single plants by Prepaid Parcel Post; larger orders by Rail Express, shipping charges collect.

Most of the following are Beall hybrids — a big, newly received shipment of fine, husky plants that complete the clearing of the benches Mr. Beall now plans to devote to Cymbidiums. Any of you who previously purchased Beall hybrids from me already know what healthy plants they are, and what excellent bloom producers! Newer Orchid friends can now make the same happy discovery.

GROUP NUMBER ONE - CHOICE AND RARE - UNUSUAL COLORS

- BLC GILLIAN (BL LOTOS X LC PRESIDENT WILSON) — Chartrause to yellow "Brasso"; good form and heavy substance. Old rose markings in lip and throat.
- LC YELLOWSTONE RIVER (KUAKINA X C. SARA COHN, 'WESTERN GOLD') — Rich yellow to bronze; red lips marked with gold veins deep in throat.
- BLC COPPER MOUNTAIN (BC SINDORO X LC DAMISELA PINTADA) — Full, heavy blooms of pink-flushed pale gold to deep, coppery bronze with full, glowing cerise-red lips.
- SLC COPPER GLEAM (Hermes X Maggie Raphael aurea) — Ranges in color from bronze-brushed rose to coppery gold with crimson-purple lips.
- SLC CANYON RUN (LINDORES X C. BOWRINGEANA) Charming clusters of four to five inch bright red-lavender blooms with glowing red-purple lips and throats. When sunlight strikes the petals they sparkle as though dusted with silver.

Group Number 1 Prices: Single Plant (your choice)	\$ 25.00
ANY THREE GROUP 1 PLANTS (your choice)	\$ 65.00
ONE EACH (ALL FIVE GROUP 1 PLANTS)	\$100.00

GROUP NUMBER TWO - STURDY, MATURE HYBRIDS - BETTER THAN AVERAGE  
(Color Ranges from Pure White to Royal Purple)

- C. WHITE CHRISTMAS (Trentino X Myra Peeters) — Free-flowering white hybrid with wide variation in size, form and flowering dates. While some do flower for Christmas season, many flower a second time in May or June. Those favoring the Trentino parent have very heavy substance; long lasting quality.
- BLC KAUAI (Sunstar X C. trianae) — Full rosy-pink to dark fuschia; gold in throat. With L. tenebrosa, C. Dowiana and B. Digbyana in the background of Sunstar, some should be chartreuse to yellow, but most are not. Bright overtones and full lips are the principal indication of the BLC parent.
- LC WALTER WINCHELL (DUPRESAN X C. TAPPAN) — This hybrid runs mostly to the dark tones, with glowing, dark purple lips. Northern commercial growers control it for special Fall and Winter occasions that demand lots of cut flowers.
- BC GLACIER (C. Eleanore alba X Bc Queen Alexandra)—Fine, big white "Brassos", always in demand for their showiness and fragrance; some with faint tinge of rose on backs of sepals; full fringed lips.
- BLC HURRICANE RIDGE — (Bella X C. Spirit Lake) — In the background of this one, you'll find C. Dowiana three times and L. tenebrosa once, as well as B. Digbyana, so that intensely rich colors should predominate, as well as the desired full form.

Group Number 2 Prices: Single Plant (your choice)	\$15.00
Any Two (your choice from Group 2)	\$25.00
One of EACH (all five in Group 2)	\$50.00

GROUP NUMBER THREE - MATURE HYBRIDS - DEPENDABLE BLOOM PRODUCERS

(Pink -Lavender to Deep Purple, Including One Cluster-Type)

LC VANDELETTA (IBBIE X C. LEDA) — These are selected dark varieties of that popular cluster type hybrid; mostly brilliant reddish purple; some with darker "feathers" of color at petal tips.

LC ELIZABETH LIND (Sagana X Walter Jewell) — Free-flowering light to medium-dark flowers of good size and keeping qualities; dark fan of fuchsia in lip.

LC GARRISON BAY (Adolph LeMoult X Elizabeth Lind) — Adolph LeMoult is a cross of Santa Claus X Helen Wilmer, and like most Helen Wilmer hybrids, has bold round form with full, brilliant lip — dominating most of these Garrison Bay flowers. Good producers, with striking color contrasts.

C. DELAVAN (Tower X Mossiae, 'Dale's Royal King') — Good producer of medium to dark red-lavender flowers; many of twice yearly bloom habit. Spring, Fall.

BLC COWICHAN BAY (Heather Queen X C. Amabilis) — Rose colored "Brasso" type with good production of full, showy flowers for varied seasons.

LC CARADAC (Crowborough X C. Fabia) — Crowborough has fostered many fine hybrids, such as Lc Gertrude Hampton and Blc Irene. Crossing it with a fine, dark Fabia caused most of the progeny to be darker than average, some favoring the cherished plum tones. Autumn.

BC GLACIER PEAK (Bc Glacier X C. Estelle alba) — The White Braso, crossed with the big white Cattleya, was expected to be white, but most of them are a nice pastel pink, instead, and many have remarked they like them even better! Funny, the way a tiny bit of pink in a Brasso — even on the backs of sepals — will show up *all* over the progeny! But it's not bad at all, if you like 'em pink.

Group Number 3 Prices: Single Plant (your choice) .....\$10.00  
Any Three (your choice from Group 3) .....\$25.00  
One of EACH (all seven plants in Group 3) .....\$50.00

\* \* \* \* \*

GROUP NUMBER FOUR - MATURE HYBRIDS - ESPECIALLY COMPILED FOR THOSE OF YOU WHO WISHED FOR MORE ON MY CHRISTMAS SPECIALS! EQUALLY GOOD SELECTION!

BLC MEMORIA EDMUND MEANY (Sunstar X Lc C. G. Roebling) — Spring and Summer free-flowering hybrid for light lavender blooms, some nearing the peach tones. Occasionally this one flowers again in Winter and one is blooming as this is being written.

C. FABIA, 'SELECTED DARK' (DOWIANA X LABIATA) — Dependable Autumn blooming hybrid used many times in further hybridizing because of its rich, dark red-purple tones.

BC RUBY (Mrs. J. Leeman X C. Labiata) — Most of these are darker than average "brasso" types, shading up to the ruby colors that prompted the name. Some twice yearly, Autumn and Spring.

C. APALACHEE (Cowaniae X Nebo) — C. Intertexta, showing up twice in this cross, insures its free-flowering habit for dependable production of light lavenders. Some are in sheath as this is being typed, and first orders will get them!

C. EMMA FISCHER (C. COMET X DUPREANA) — If you like Warnerii hybrids, this one has a double portion in its background. Good grower and bloom producer in varying shades of lavender for early Summer or twice yearly.

C. REGINA (Labiata X Dupreana) — Nice, darker than average blooms in quantities for Late Summer, Fall season. Can be grown into big, showy, specimen plants that will flower simultaneously on several leads. But don't forget that any hybrid with Labiata in its background is apt to form double sheathes in advance of buds forming. Sometimes buds need to be helped out of double sheaths.

Group Number 4 Prices: Single Hybrid (your choice) .....\$ 8.00  
One of EACH in Group 4 (All six plants) .....\$25.00
